**Behavioral Assessment - an overview | ScienceDirect Topics**

Stephen N. Haynes, in Handbook of Psychological Assessment (Third Edition), 2000 SUMMARY. The behavioral assessment is a powerful and evolving psychological assessment paradigm. It is the subject of many books, published articles, symposia, and presentations at scientific
conventions. Behavioral assessment methods are often used in clinical practice and are taught ...

**Language impairment in Alzheimer’s disease and benefits of**

Aug 02, 2013 · Introduction. Alzheimer’s disease (AD) is the most common etiology for dementia. Worldwide, it is currently estimated that 35 million people have AD or a related dementia, and with increasing life expectancy, global prevalence is projected to increase to around 66 million by 2030 and to more than 115 million by 2050. In the United States, 5.4 million individuals of all ages are ...

**Clinical features and diagnosis of Alzheimer disease**

Dec 11, 2020 · INTRODUCTION. Alzheimer disease (AD) is a neurodegenerative disorder of uncertain cause and pathogenesis that primarily affects older adults and is the most common cause of dementia []. The most essential and often earliest clinical manifestation of AD is selective memory impairment, although there are exceptions.

**Augmentative and Alternative Communication and Voice**

The ease and simplicity of use of typical natural speech mask the complexity of a speech production process that involves precise control and coordination of respiration, voice, articulation, and language comprehension and expression (van der Merwe, 2009). For many, speech is the external expression of language, and the motor skills involved are performed with accuracy and speed, ...

**Memory - Wikipedia**

Memory is the faculty of the brain by which data or information is encoded, stored, and retrieved when needed. It is the retention of information over time for the purpose of influencing future action. If past events could not be remembered, it would be impossible for language, relationships, or personal identity to develop. Memory loss is usually described as forgetfulness or amnesia.

**Epilepsy - Wikipedia**

Epilepsy is a group of non-communicable neurological disorders characterized by recurrent epileptic seizures. Epileptic seizures can vary from brief and nearly undetectable periods to long periods of vigorous shaking due to abnormal electrical activity in the brain. These episodes can result in physical injuries, either directly such as broken bones or through causing accidents.
