Errors, Blunders, and Lies - David S. Salsburg 2017-05-18 We live in a world that is not quite "right." The central tenet of statistical inquiry is that Observation = Truth + Error because the most careful of scientific investigations have always been beset by uncertainty. Our attempts to understand things are plagued with small errors. Our attempts to understand our world are beset by the same. Indeed, we are often wrong about things. Sometimes we mislead ourselves. Our attempts to measure things are plagued with small errors. Our attempts to understand our world are beset by the same. Indeed, we are often wrong about things. Sometimes we mislead ourselves. Errors, blunders, and lies have always been a part of the scientific endeavor. In this long-awaited follow-up to his well-regarded bestseller, The Lady Tasting Tea, David Salsburg opens a door to the amazing widespread use of statistical methods by looking at historical examples of errors, blunders, and lies from sciences as diverse as archeology, law, economics, psychology, medicine, education, technology, and more. In doing so, he shows how statistical methods have been used to uncover hidden data, how statistical methods have been used to uncover hidden data, and how statistical methods have been used to uncover hidden data. Beginning with Edward Arrow's examination of the experience of Venus and ending with a discussion of how many tanks Rommel had during the Second World War, the author invites the reader to come along on this easily accessible and fascinating journey to understand the nature of errors, understand the nature of errors, and figure out who the liars are.
