estem, ‘emotional inoculation’ against regression, and the emergence of a future-oriented perspective characterized by confidence and hopefulness. Therapists need a clearly defined and well-documented set of guidelines for the treatment of sexually abused children. Abused children become adult perpetrators in numbers disproportionate to the rest of the population, but this dire statistic holds true only for those victims who have not been effectively helped as children. This book offers a means to provide such treatment.

Psychotherapy with Male Survivors of Sexual Abuse-Alan Corbett 2018-04-17 While the psychotherapeutic world has made significant strides in documenting the treatment of women victims of sexual abuse, little has been written on therapeutic responses to men. This may be understood as being partly due to the reluctance of male survivors to expose their history of abuse to clinical eyes. This may be exacerbated by a particular brand of masculine shame that causes male victims to be even more silenced than female survivors. Based on the author's extensive clinical experience of working with children and adult victims of sexual crime, Psychotherapy with Male Survivors of Sexual Abuse looks at the long history of male sexual abuse, positioning it not simply as a new phenomenon, but one that has a long but undocumented history. Anonymous case studies provide the backdrop for in-depth explorations of various consequences of sexual abuse, including sexual addiction, profound depression, gender dysphoria, eating disorders, self harm, suicidal ideation, and dissociation.

Understanding the Effects of Child Sexual Abuse—Sam Warner 2009-01-13 Child sexual abuse is a global problem that negatively affects many women and girls. As such, it has long been of concern to feminists, and more recently mental health activists. This book draws on this revolutionary legacy, feminism and post-structuralism to critically examine current perceptions of women, girls and child abuse in psychology, psychiatry and the mass media, and to re-evaluate mainstream and feminist approaches to this subject. The book aims to contribute to the ongoing development of a knowledge-base for working with abused women and girls, and demonstrates the need to question the use of formulaic methods in working with abused women and girls. It calls for an explicit concern with politics, principles and ethics in the related areas of theory, research and practice. Using real life situations, women who sexually abuse children, and who are detained in maximum security mental health care, Sam Warner explores and identifies key principles for practice. A social recovery model of intervention is developed, and case study examples are used to demonstrate its applicability in a range of practice areas. These include abuse psychotherapy; expert witness reports in child protection; with mothers of abused girls, and with women and girls in secure care contexts. This thorough investigation of this emotive issue provides a clear theoretical and practical framework for understanding and coping with child sexual abuse. This book will be of interest to anyone who works with children and adults who have been abused. This includes clinical psychologists, therapists and other professionals that work in mental health, psychotherapy and social services; and legal settings within both community and secure care contexts. It should also be essential reading for students and academics in this area.

With personal case histories of victims and their families, this is a powerfully written and meticulously researched book that is a landmark in the field of child sexual abuse literature.

Strengthening coherence between social protection and productive interventions—Prifti, E. 2021-05-05 The aim of this study is to explore the distributional impacts on poverty and income of two programmes in Zambia, the Home Grown School Feeding (HGSF) programme and the Conservation Agriculture Scale-Up (CASU) project, complementing the impact evaluation findings by Prifti & Grisspan (2019). These programmes target different parts of the population but are partly overlapping; they aim to influence poverty and food security through different channels. In the World Food Programme (WFP)'s HGSF modality, school feeding or provision of free meals for schoolchildren is complemented with procurement of food used for the meals from local smallholders. The purchase scheme aims to provide market access for smallholders, hence improving income stability and incentives to invest, ultimately increasing their productivity and reducing poverty. The objectives of school meals alone are improvement in schoolchildren's nutrition as well as improvement in school attendance and hence human capital accumulation. Conservation agriculture (CA) consists of practices that reduce farmers' vulnerability to climatic risks and improve productivity. The CASU programme proposed the use of such methods among smallholders through training and demonstration and provision of inputs, aiming for adoption of more sustainable farming which increases farm productivity in the long run.

The lasting effects on survivors are increasingly recognized and can be addressed psychotherapeutically. Psychoanalytic Psychotherapy After Child Abuse is unique in two ways. Firstly, in bringing together for the first time the considerable scientific evidence of effectiveness and the vast body of accumulated clinical experience using psychoanalytical approaches in the treatment of people who have experienced childhood abuse. Secondly, in being the product of the widest collaboration of individuals and organizations concerned about the effects of child abuse, and experts on child abuse and psychotherapy. These include experts by experience, survivor groups, activists, academics, and clinicians: paediatricians, physicians, child and adult psychiatrists, psychoanalysts, psychologists, and psychoanalytic psychotherapists.

Live Company—Anne Alvarez 2012-11-12 Children whose minds as well as bodies have been damaged by the intrusions of sexual abuse, violence or neglect, and others, quite different, who are handicapped by their own mysterious sensitivities to more minor deprivations, may experience a type of black despair and cynicism that require long-term treatment and test the stamina of the psychotherapist to the utmost. In Live Company, Anne Alvarez reflects on thirty years’ experience of treating autistic, psychotic and borderline children and adolescents by the methods of psychoanalytic psychotherapy. Central to the book is the moving story on an autistic child’s long struggle between sanity and madness, in which the author describes the arduous journey that she as therapist and he as patient made towards new understanding and his partial recovery. Modern developments in psychoanalytic theory and technique mean that such children can be treated with some success. In the book the author discusses these developments, and also describes some of the areas of convergence and divergence between organicist and psychodynamicist theories of autism. Particularly important is her integration of psychoanalytic theory with the new findings in infant development and infant psychiatry. This has enabled her to formulate some new and exciting ideas and speculate on the need for some additions to established theory. Anne Alvarez has produced a professionally powerful and enlightening book, drawn from her extensive experience as a child psychotherapist at the Tavistock Clinic, which will be of interest to all professionals involved with children and adolescents as well as anyone interested in madness and the growth of the mind.
